

Wikipedia Reverse Lookup

Brief:

A tool to search Wikipedia, not by content, but by reference. Searches return pages on Wikipedia that the item is referenced/linked on.

Eg. Searching “Python” will return “Programming language”

Requirements:

- Basic search to find initial page titles.
- Query a page title and receive references to said page.
- Return information in a human-readable fashion.

Stretch:

- Display the context of the reference in a chosen result.
